

Form 8A: Committee decision for DIS

Secretariat: SIS	ISO/TC 211 N 5399
Project number and title: ISO/CD 19160-6 - Addressing — Part 6: Digital interchange models	

This form should be sent to the ISO Central Secretariat (<http://isotc.iso.org/livelink/si/>), together with the draft of the project, by the secretariat of the technical committee or subcommittee concerned.

The accompanying document is submitted for circulation to member body vote: ☒ As a DIS
Consensus has been obtained from the P-members of the committee: on 2020-08-12 ☐ At the meeting of . See Resolution number . In document N . ☒ By ballot initiated on 2020-06-04 Please attach a copy of the ballot results (if applicable)

Listing of the P-members (NWIP, CD or Resolution)	
P-members in favour:	14
Austria (ASI), Canada (SCC), China (SAC), Czech Republic (UNMZ), Japan (JISC), Korea, Republic of (KATS), Malaysia (DSM), Netherlands (NEN), Poland (PKN), Saudi Arabia (SASO), Slovenia (SIST), Spain (UNE), Sweden (SIS), United States (ANSI)	
P-members voting against:	3
Norway (SN), South Africa (SABS), United Kingdom (BSI)	

P-members abstaining: 19 Australia (SA), Belgium (NBN), Chile (INN), Denmark (DS), Finland (SFS), France (AFNOR), Germany (DIN), Hungary (MSZT), India (BIS), Iran, Islamic Republic of (ISIRI), Italy (UNI), Lithuania (LST), New Zealand (NZSO), Russian Federation (GOST R), Serbia (ISS), Slovakia (UNMS SR), Switzerland (SNV), Thailand (TISI), Turkey (TSE)
P-members who did not vote: 1 Eswatini (SWASA)
Remarks: The Committee Draft is approved but with three negative votes. The comments received on the CD ballot (incl. comments from TMG) will be sent to the convenor of ISO/TC 211/WG 7 and the project leader for consideration and preparation of the draft DIS.

I hereby confirm that this draft meets the requirements of Part 2 of the ISO/IEC Directives:		
Secretariat: SIS	Date: 2020-08-12	Name/Signature of Committee Manager Åhlin, Mats Mr

Comments from the Terminology Maintenance Group (TMG) are added by the secretariat.

Annex A: Result of voting

Annex B: Table of comments incl. comments from TMG

Result of voting

Ballot Information

Ballot reference	ISO/CD 19160-6 - N 5352
Ballot type	CD
Ballot title	Addressing — Part 6: Digital interchange models
Opening date	2020-06-04
Closing date	2020-07-30
Note	

Member responses:

TMG -001				Ed	AXO (address interchange object) from the scope could be added as a new terminology entry or at least as an abbreviated term in an abbreviated terms clause.	consider defining address interchange object or AXO	
No 1- 001 -002				Ge	Several of the UML models in the document is impossible to read (figure 3, 6, 7). Others are blurry but with a good will and imagination readable (figure 8). The others are interpretable but should also be corrected at the next stage. Looking into the harmonised model (http://iso.sparxcloud.com/index.php) there is a shortcut to models in development, but the package on ISO CD 19160-6 seems to be empty. That also aligns with the report from HMMG during the last plenary meeting, that the model has not been checked by HMMG before submission.	We propose a new CD ballot after the models have been checked by HMMG and in a readable state in the document.	
ZA 1- 002 -003				Ge	A register of ISO 19160-1 compliant profiles is an important addition to the ISO 19160 multi-part standard. However, the current version of the document convolutes the register of address profiles with the interchange of addresses, and the concept of a profile is not presented correctly.	Revise the document to focus on a register of profiles only. ISO 19160-6 should specify how the profiles are maintained in a register; there is no need to redefine what an ISO 19160-6 profile is. The document should be revised to be compliant with ISO 19160-1 (addressing) and ISO 19106 (profiles), see for example, ISO 19160-1 profiles available for several countries, including South Africa (https://store.sabs.co.za/catalog/product/view/?ignore_category/1/id/2142454/s/sans-1883-2-2018-ed-1-00-2/), New Zealand, and UK.	
CN- 079 -004		General		ge	There is a risk that the digital address may be modified intentionally, so it is better to add content about verification mechanism	It is better to add content about verification mechanism	
CN- 080 -005		General		ge	Compared with general address, machine-readable address has its own special properties, so it is better to add content about the quality of machine-readable address	It is better to add content about the quality of machine-readable address

MB/ NC ¹	Line number	Clause/ Subclause	Paragraph/ Figure/Table	Type of comment ²	Comments	Proposed change	Observations of the secretariat
					<i>readable and interoperable among different machines or systems which process the address data.</i> <i>This document specifies a set of data models that focuses on enabling software applications the digital interchange of address profiles, address instances and instructions for their input and display suitable for machine encoding of address information. These models are called the "Address Interchange Object" ("AXO") models.</i>	machines or systems which process the address data. This document specifies a set of data models that focuses on enabling software applications to digitally interchange address profiles, address instances and instructions for their input and display suitable for machine encoding of address information. These models are called the "Address Interchange Object" ("AXO") models.	
ZA 3- 014 -011		0.1	3 rd paragraph	Ed	Typo: The interchange of addresses require...	The interchange of addresses requires...	
ZA 5- 015 -012		0.2		Te	Under the second bullet, the relationship between ISO 19160-1 and ISO 19160-6 is described, instead of the relationship between ISO 19160-4 and ISO 19160-6. Also the relationship to ISO 19160-3 is not included.	Instead of describing the relationship between ISO 19160-6 and each other standard, describe the purpose or role of each standard.	
ZA 4- 016 -013		0.2		Te	ISO 19160-1 describes a single conceptual model, as indicated in its scope statement: "This part of ISO 19160 defines a conceptual model for address information". Also, profiles are not necessarily international.	Replace with: ISO 19160 defines a conceptual model for address information. An ISO 19160-1 profile can be used as address specification for individual countries or communities. This document...	
US- 017 -014		0.2		ge	The work done by the ISO 19160-5 PT was important, however there does not appear to be document accessible to the reader/user of 19160-6. It seems that a project should not be referenced unless it has a deliverable (IS, TR, etc.) that can be reviewed.	Consider removing entire paragraph 3: ISO 19160-5 focuses on the rendering of addresses for different devices with a focus on their representations on maps, virtual and augmented reality.... Alternatively, reference a different relevant ISO standard if possible.

Annex B

Project:

MB/ NC ¹	Line number	Clause/ Subclause	Paragraph/ Figure/Table	Type of comment ²	Comments	Proposed change	Observations of the secretariat
					a register of normative content, that is managed by an ISO Maintenance Agency, and a register of informative content that is managed by an ISO Registration Authority.		
TMG -040		5.2			the note in 5.1 states that: Reference to the ISO 19135-1 requirement is denoted by η (i.e. [η2] = Requirement 2). Then 5.2 begins to define the requirements using this format: Requirement 1 [η1]: The register... where use of both "Requirement 1 and η1 seems to be a bit redundant. While some TC211 standards used that notation, many others have do not make use of it for designating requirements. Requirement 13 is missing such notation and the sequence is mis-numbered thereafter.	consider formatting the requirements following formatting rules of more recent TC211 standards	
GB-034 -041		5.2		Ge	How does copying requirements 1-12 from ISO 19135-1 relate to the statement that 19135-1 is a normative reference? The standard statement at 2 indicates that "some or all" of the content of the referred document constitute requirements of this document. Copying the text to this document implies that it is that copied text that is the requirement of this document, not the original.	Suggest referencing 19135-1 (+ Amd1) requirements 1-12, rather than copying them. This is in line with what is done in clause 5.5 in relation to 19160-1, except that that standard does not provide explicitly identified requirements. Perhaps more importantly, it is what is stated at 6.1, which says the roles & responsibility are set out in ISO 19135-1, not in this clause 5.2 I acknowledge that this results in a less use friendly document. The alternative, as in this draft, is to move 19135-1 from being normative to bibliographic – and changing the reference to 19135-1 clause 5 in clause 6.1 of this document to be a reference to clause 5.2 in this document.	
GB-035 -042		5.3		Ge	See comment for 5.2, but here applied to ISO 19135-1 requirements 13, 14, 16, 17, 19, 21, 22, 23		

Comments on ISO/CD 19160-6 incl TMG comments

						with something like "The recipient or service that receives an interchange address instance may choose to validate the address against the profile, retrieving it from the register"	
ZA 17- 046 -053		6.3.5			It not clear what the recipient or service is and which role they play.	Clarify the role of the recipient and service.	
ZA 15- 047 -054	Pg 11	6.3.5.1		te	Cannot open the two hyperlinks in this paragraph.		
US- 048 -055		6.3.5.1		ge	It's unclear how the text in this clause relates to the title, Improving quality of an interchange address. There are several phrases such as "improving conformance level", "address structure", and "fully-specified address structure" that lack context and explanation. Also this clause seems to relate to Clause 13, Address feature, but there is no explanation as to how.	Expand on this section with explanation of terms and concepts introduced. Providing examples are also recommended. Explain how this clause relates to Clause 13, Address feature if appropriate.	
ZA 16- 049 -056	Pg 11	6.3.5.2		te	Cannot open the hyperlink in this paragraph.		
ZA 18- 050 -057		6.3.6			It not clear what the processor is and which role it plays.	Clarify the role of the processor.

Document: ISO/TC 211 N 5399
Annex B

Project:

MB/ NC ¹	Line number	Clause/ Subclause	Paragraph/ Figure/Table	Type of comment ²	Comments	Proposed change	Observations of the secretariat
GB-064 -071		10.3	Table 7	Te	Avoid "shall" in a definition (here embedded in a table). "Shall" is reserved in ISO for requirements. Question for HMMG? How to deal with requirements that are caused by constraints in the data models? Should they be called out as requirements of the standard, or left implicit in a general requirement to adhere to the model.	Either call this out as an identified requirement of the standard Or add it as an OCL "unique" constraint on the model	
GB-065 -072		10.4	Second paragraph	Ed/Te	Avoid "MUST" in ISO documents. Number (identify) all requirements. Also, grammar	Change "A ProfileComplinatAddress MUST conform to this AddressComponentSpecification to specifies its components." To "Requirement N: A ProfileComplinatAddress shall conform to this AddressComponentSpecification to specify its components."	
KR-066 -073	Page 19 Figure 7	11	Figure 7	Clearance	Cannot read the Figure 7.	Need to be improved in terms of resolution	
GB-067 -074		11	Figure 7	Ed/Te	This UML diagram does not look to have been harmonised. It uses an unusual syntax for labelling the association. Also, ISO doesn't like text in the "undivided part" of a clause that then has sub clauses	Harmonise the model & use the diagram from that.	
ZA 27-068 -075	Pg 19	11	Figure7	ed	Cannot read anything on the image of the data model, and therefore cannot comment on it.		
ZA 28-069 -076		11.1		Te	An ISO 19160-1 Address class included in a profile of ISO 19160-1 is already compliant with the profile. There is no need to have a ProfileCompliantAddress class.	See ZA 1 for examples of profiles.

Annex B

Project:

MB/ NC ¹	Line number	Clause/ Subclause	Paragraph/ Figure/Table	Type of comment ²	Comments	Proposed change	Observations of the secretariat
US-077 -084		13.2		ge	This clause needs more clarification. The term “structure” is used but the text implies “parsed”. An address can be syntactically (structurally) correct even if not maximally parsed. Also it should be noted that even if a fully parsed form was presented to a common person, it could still be filled out partially or completely unparsed. In addition, “SpecificationLevel” does not seem to capture what is being indicated.	Add text and examples to clarify what is meant by “structured”. Consider using different terminology (e.g., parsed). Consider renaming “SpecificationLevel” (e.g., StructureLevel, ParseLevel, etc.).	
US-078 -085		13.3		ge	This clause pertains to address quality but there is no reference to ISO 19160-3 here or elsewhere in the document. While evaluating address data quality is out of scope for part 6, it should recommend the use of part 3 for data providers or users.	At a minimum, add a statement such as: <i>Address data evaluation is out of scope of this international standard. However, address data managers, aggregators, and users should refer to ISO 19160-3 Address data quality for address data quality evaluation and reporting guidelines.</i>	
AU-007 -086		7, 10, 11, 12	Figures 3, 6, 7 & 8	ed	Figures are unclear and illegible, even at high zoom	Insert higher resolution images	
AU-003 -087		C.1	Figure C1	ed	One line of code is partly obscured	Replace image	
AU-004 -088		C.11	Figure C11	ge	This figure, and others, indicate URIs for identification of resources, in this case a UK profile of 19160. Are these URIs intended to resolve? If so, what is the logic for profile identification and why has the pseudo file extension “.adp” been chosen over a regular string token?	Logic for the propose URIs should be established with GOM	
AU-005 -089		D.1.1.1	Figure D1	ed	Unnecessary blank lines	Remove blank lines	
AU-006 -090		D.1.1.4	Figure D4	ed	A JavaScript variable is, presumably accidentally, included in the figure rendering this JSON invalid	Remove JavaScript variable and equals sign
